

## Advanced fibre ropes from African Maritime Services.

We have recently experienced an increase in demand from customers for advanced fibre ropes – particularly Dyneema and Hipamix ropes.

During April we delivered a 30m long Grommet type towing sling for use onboard the salvage tug “Smit Amandla” (pictured below).

This towing grommet was made up of 104mm EUROFLEX® (Hipamix) rope (doubled to form the grommet) and was fitted with MBL 500t thimbles and links at each end. The grommet's MBL was 453t.

Dyneema SK75 ropes (branded as EURONEEMA® SK75) can be supplied either as a 12-strand rope or with the rope enclosed in a Tipto or PES braided jacket.

All Euroneema® SK75 ropes are treated with a special yellow coating which significantly increases the ropes visibility and retards wear on the rope.

For more information on our range of Euroneema® ropes visit selected pages from our website by clicking on these links:
